

KOSMOS System Design Note 0

Title: KOSMOS System Design Notes Organization
Author: Jay Elias
Revision: 0
Date: August 25, 2009

Introduction

Documentation relative to science requirements, system engineering and other matters will be organized as “system design notes”. This is an approach that has been used effectively on other major NOAO projects (and elsewhere). This document is intended to provide a template and to provide an overview of the number scheme for the SDNs. Revisions will primarily address additions to the table below:

SDN Numbering

Topic	SDN Number
SDN Organization	0
Science Requirements and Flowdown	1.xx

SDN numbers may be further sub-categorized as necessary – i.e., SDN 1.03.1 would be a note providing more detail on a topic covered in SDN 1.03.

This scheme is intended as a framework and not a straitjacket.
